

Welcome to Our First Project Update

Welcome to our first [CENTAUR](#) Project Update! By joining our community, you will stay informed on the latest project progress, news, and events.

[CENTAUR](#) aims to address flood-related threats in urban areas and water and food insecurity by building on the solid foundations of the [Copernicus Emergency Management Service](#) (CEMS) and the [Copernicus Security Service](#) - Support to EU External and Security Actions (CSS-SESA).

Currently, our team is developing a set of crisis indexes which will serve as a basis for developing new products to be integrated with the two Copernicus services, enriching their current product portfolio and improving the EU's early warning and disaster management capabilities.

Whats New?
